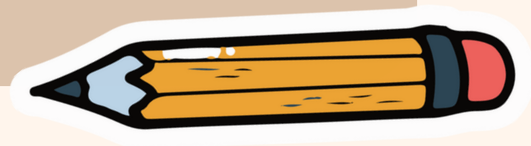
Overview

Microsoft Business is examining its operation by comparing different datasets in order to increase its revenue.

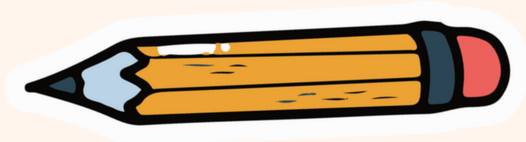


Business Understanding

In this process, we are trying to understand the Microsoft clientele and their audiences.

Data Understanding

The process of understanding, going through the data sets given.



Data Preparation

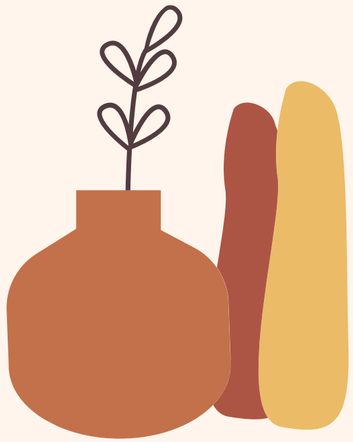
Reading, analyzing the various datasets given, and comprehending the data.

Data Cleaning

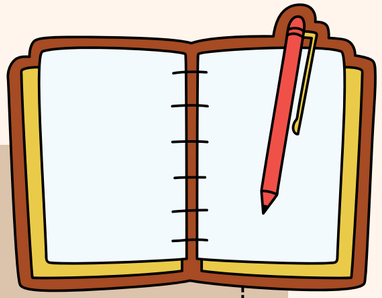
This process prepares the data and identifies any missing values, duplicates, or outliers. It also ensures that we have accurate.

Data Analysis

This process involves examining the cleaned data and giving effective solutions to the business.

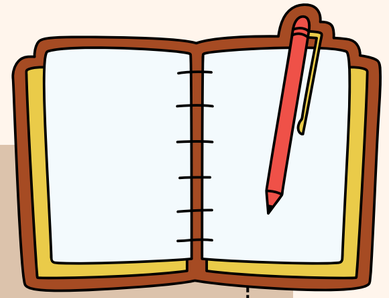


Conclusion



The data analysis has given great insight into the data and a better recommendation on how to improve Microsoft business operations.

Recommendations



The most watched movie is Bluebeard which is a fairy tale, Microsoft should ensure that the movie is accessible to all countries.
